# ZY001 & ADS

## Final polishing film for optical connector end face

ZYPOLISH ZY001 use precision silica coating on a polyester film , which is ideal polishing film for the final polish of optical connector end face: These films could provide perfect end face of an optical connector without scratches or residues. Also, there is no adhesion of polishing film binder or silica grains

NTT-AT's polishing films (ADS)are selected by customers who require stable polishing performance and high yield.

### Properties

#### Order example standard model

ZY001 OR ADS

#### Packaging unit

100 piece/pack

Diameter .....	4 inch,5 inch,8inch, Or customized
Abrasive material .....	Silicon Dioxide
Abrasive size .....	120nm
Attachment Type .....	Plain Back
Color .....	Transparent
Brand .....	Zypolish
Product Form .....	Film

#### FC031 highlights

- High Yield, increased throughput
- Consistent protrusion values
- Low insertion loss and back reflection
- Low defects
- Multiple use product
- Available in discs, sheets or rolls
