

Fiberoptic Switch Module

S-MODUL FSM is the step motor based switch for Network system, Remote monitoring system and test equipment. The FSM is also available for input and output port with various numbers upon customization for both single mode and multi mode fiber.

Features

- 3 types of Dimensions
- Ultra-low insertion loss
- High-Reliable / long- life time
- Mass configuration of large
- number of outputs: Up to 96 channel
- Lower in cost
- Easy to integrate with small size
- High signal stability
- Low polarization dependent loss

Applications

- Automated component manufacturing test
- Remote network monitoring
- Hybrid network switch
- Network IP over optical routing
- RF over fiber
