

Unleashing the power
of integrated photonics

Pilot Line for Indium Phosphite photonic integrated circuits (PICs)

Integrated photonics is a fast, energy sufficient and compact technology that is implemented in a variety of industries. We offer our clients a modular pilot line with services to take the step from prototype to commercialisation.

Design Service

Design houses help you translate your applications into an optimised PIC design ready for (large scale) manufacturing.

Manufacturing Service

Foundries offer robust and reproducible fabrication of customised PICs cut into dies via dedicated wafer runs.

Testing Service

Partners are developing test automation methods to allow customers to remotely characterise chips straight out of the fab.

JePPIX is an eco-system of world class integrated photonics experts. As a united supply chain, we act as a coherent force to advance PIC technology. Contact us to take the next step in advancing PIC technology in markets such as aerospace, healthcare, and communications.
