

For Immediate Release
Fiber-Optic Components for 2-micron Wavelength

DRAFT RELEASE – Version 1.0

Santa Clara, California, USA – May 25th, 2021 – AC Photonics, Inc., a world leading supplier of fiber optic products for a variety of diversified applications, introduces new fiber-optic components operating at 2-micron wavelength. Spectral region at 2 micron is important for a number of innovative applications in LIDAR and gas sensing, currently experiencing rapid growth. We are now offering PM and non-PM versions of the 2-micron splitter / coupler. Contact AC Photonics for further information regarding our products and their applications.

About AC Photonics, Inc.

Founded in 1995, AC Photonics designs, manufactures and markets fiber optic components, devices and systems for a variety of diversified applications. With our highly experienced engineering and production team based in Santa Clara, CA, USA, AC Photonics provides full engineering and manufacturing support to our customers' projects. From concept to design phase to large-volume manufacturing, we work in close interaction with our customers' teams to make sure our products meet and exceed their expectations. AC Photonics is ISO 9001:2015 certified. For more information about AC Photonics and its products, please visit www.acphotonics.com.
