

For Immediate Release
Custom Fiber-Optic Modules

DRAFT RELEASE – Version 1.0

Santa Clara, California, USA – May 25th, 2021 – AC Photonics, Inc., a world leading supplier of fiber optic products for a variety of diversified applications, announces availability of new custom modules, including :

- New custom module featuring high fiber length tolerance for optical coherence tomography (OCT)
- New erbium-doped fiber amplifier (EDFA) custom modules for high-bit-rate optical networks

These custom modules are made by AC Photonics in working closely with our customers to meet the growing industry needs in high-quality fiber-optic devices. Contact AC Photonics for further information regarding our products and their applications.

About AC Photonics, Inc.

Founded in 1995, AC Photonics designs, manufactures and markets fiber optic components, devices and systems for a variety of diversified applications. With our highly experienced engineering and production team based in Santa Clara, CA, USA, AC Photonics provides full engineering and manufacturing support to our customers' projects. From concept to design phase to large-volume manufacturing, we work in close interaction with our customers' teams to make sure our products meet and exceed their expectations. AC Photonics is ISO 9001:2015 certified. For more information about AC Photonics and its products, please visit www.acphotonics.com.
