SYLFA HD
Next-generation front access solution
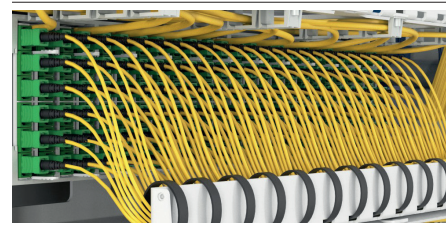

Maximises space

High port density combined with proven NGR rack makes the most out of available space while providing excellent support for organising patch cord overlengths.

Saves time

Fast and effective installation approach using plug-and-play pre-terminated connectivity functionality and patented LC push-pull connector reduces the need for future MACs.

Improves accessibility

There is no need for rear access. All incoming and outgoing cables are accessible from the front.

Reliable fiber protection

The fixed module design allows no movement while patching as both incoming and outgoing cables are fixed.

Future-ready

The modular approach offers scalable upgrade options on demand.

Easy termination

Centralised splicing area powered by CTS offers optimal access and fast splicing.
